
Research Question

Thinking about the Aims influencing the design of your Research Proposal

Review your Three Aims exercise from last week (self-directed exercise two) to support you in the development of a draft research question. Post on your WordPress blog when you have completed the exercise.

Part One: 20 minutes self-reflection and documentation

Reflect on your proposed project, consider & respond to these questions.

1. What does this research project explore?
(what is your hunch or area of interest... name an idea or concept - not a description of something).
2. ...by doing what? (making or thinking about/considering, reflecting on. This could be a key context, your discipline knowledge, a method or approach).
3. ...in order to do what? What do you want to understand, find out or test? (what is the main theme, subject or concern?).
4. ...so that... What's the point of your research? (this is the 'so what' part of the question - explain why are you doing this research?)

Using the worksheet and template below, write a draft research question.

Make notes as you ask these sections, then draft out a research question using the template at the bottom of this worksheet.

What does this research project explore?
(what is your hunch or area of interest... name an idea or concept - not a description of something).

- How can I as a designer solve these issues, and apply them to my own concept of medical space?
- Issues with healthcare design- Design being overwhelming added to stress.
- Design response/solution to issues within medical experiences and environments.
- Teleyhub
- Responses to Healthcare- Auckland Communities
- Biophilic Design
- Hygge
- Fruad- phycological design
- Safe design

Research Question

<p>...by doing what? (making or thinking about/considering, reflecting on. This could be a key context, your discipline knowledge, a method or approach).</p>	<ul style="list-style-type: none"> • Using the theory of hygge, to further create a safe and supportive medical experience. • Using the theory of biophilic design, to further create a safe and supportive medical experience. • Sigmund Fruads theory on controlling emotions through a layout of a space. • Changing community's perspectives on healthcare- through this design experience. • Practice/method- Surface design + exploration to create elements of support. • Using exploration of materials to create support for users.
<p>...in order to do what? What do you want to understand, find out or test? (what is the main theme, subject or concern?)</p>	<ul style="list-style-type: none"> • Explore the examples of public medical spaces, within Auckland (through District Health Board) understand the current design problems. What the experience is like within these spaces. • Explore the design of the current "Teleyhub", within Henderson (through District Health Board) understand the current design problems. What the experience is like within this space. • Understand of design works relaxing and calming- hygge.- Exploring how it is applied to a medical space. • Explore the layout and design elements and concepts, to create a safe and supportive health environment. • Understanding the theory of biophilic design in relation to medical spaces, to create a calming and therapeutic atmospere. • Testing out my research and exploration of design to achieve a safe medical environment- in set community space. • Understand the set communities' relationship with medical spaces? what are the reasonings for their medical neglect?
<p>...so that...What's the point of your research? (this is the 'so what' part of the question - explain why are you doing this research?)</p>	<ul style="list-style-type: none"> • To stop the neglect in healthcare for many communities. Helping people become healthier faster, rather than last minute. • Providing further local support for communities.- Removing the boundaries of care. • Understanding and solving these design issues within medical acre, so it can be applied throughout the DHB. Communicate the importance and effect that design can have within spaces, the critical impact it can have within experiences- trauma and fear. • Creating a more enjoyable medical environment experinece- research and findings can be applied to other District Health Board spaces (teleyhubs).

Research Question template

Research Question

This project examines how.....(overarching concept)
 impacts on.....(primary focus)
 in relationship to(key contexts)
 using(methods/methodology)

Part Two: 20 minutes peer to peer discussion.

Work with your peer for 10 minutes on each of the sections of your research question. Make notes about your partner's responses to your question.

Discuss,

1. Clarity
2. Focus
3. Accuracy of question when mapped to your aims

This project examines how the unpleasant experience of a medical environment has within communities and creates a neglectful response to healthcare

This project explores the rest

Version 1:

- This project explores the deliverance of a safe and supportive experience for community users in a medical environment? Specifically through the influence and leverage of qualities Hygge design and Biophilic design, to provide this care for communities.

Version 2:

- How can I change the perspective and notion of medical design within communities, designing a public consultation space? Analysing and adapting the design theory of "Hygge" and "Biophilic design" to a medical environment, to deliver a safe and supportive medical experience?

Statement:

This project explores the spatial exhibition of a safe and supportive medical experience for users in relationship to the Dutch design theory of "Hygge" using leverage of its calming materiality and surface practices, to provide a therapeutic healthcare experience for local communities.

Question:

How can I explore a spatial exhibition of a safe and supportive experience for users in a medical environment? Specifically through the influence and leverage of qualities Hygge design and Biophilic Design, to provide this care for communities?

Statement:

This project explores the spatial exhibition of a safe and supportive medical experience for users in relationship to the design theory of "Hygge" and "Biophilic" using their leverage of calming materiality and surface practices, to provide a therapeutic healthcare experience for local communities.

How can the exploration of a spatial exhibition of a safe and supportive medical experience for users in relationship to the Dutch design theory of "Hygge" and "Biophilic" using leverage of their calming materiality and atmosphere practices, to provide a therapeutic healthcare experience for local communities?

Part Three: 10 minutes redrafting the research question.

Using the notes from your peer feedback, and any self-reflection you have had during your conversation, write another draft of your research question using the template.

Research Question
