

1. Identify how you might make connections between the different aims.  
She connected nature element, mental health and medical spaces. She want to let the audience feel relax and safe in the space.

2. If you believe the aims are too broad, how might they consolidate or refine them?

She focus on the medical space and the audience's well-being and how she can bring her design skill on the it.

3. Offer suggestions about how the aims can inform the focus of the research.  
May be get some research from why the audience need this space.  
How to use light and colour to let the audience feel better. ( what kind of light and colour can help) expand more may be in future?

4. How will the aims be achieved?  
she using methods of biophilic design, surface design to create her space

5. How are the aims supporting the selection and development of the draft methods?  
Her aim is using texture, colour, sound to create a space give audience a good experience in medical care.

6. Are the aims too narrow, how can they be broadened so that they reference the paradigm/s informing the project.  
I think she did a good job in her aims, and expand them very well.
